DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to a plant system, classified in class 800, subclass 288.
 - II. Claims 16-44, drawn to a method of producing a heterologous protein in a transgenic plant, classified in class 530, subclass 372.

For each of inventions I and II above, restriction to one of the following is also required under 35 USC 121. Therefore, election is required of one of inventions I or II, and one of inventions (A)-(E).

- (A). A CO₂ inducible promoter.
- (B). A heat inducible promoter.
- (C). A chemically inducible promoter.
- (D). A dark inducible promoter.
- (E). A constitutive promoter.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions (A)-(E) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Art Unit: 1638

inventions, represent structurally different polynucleotide promoter sequences each functioning differently in that each is inducible under different conditions.

3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the plant system can be used in a process in which the heterologous protein produces a desirable phenotypic change in the plant such that the plant is useful without extracting the heterologous protein. For example, the protein may alter the color or longevity of the flower, or the protein may render the plant disease resistant.

4. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the literature and sequence searches required for each of the Groups are not required for another of the Groups, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Applicant should note the provisions of MPEP 821.04, which provides for rejoinder under certain circumstances for non-elected processes making or using an elected, allowable product.

Art Unit: 1638

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

7. Papers relating to this application may be submitted to Technology Sector 1 by facsimile transmission. Papers should be faxed to Crystal Mall 1, Art Unit 1638, using fax number (703) 308-4242. All Technology Sector 1 fax machines are available to receive transmissions 24 hrs/day, 7 days/wk. Please note that the faxing of such papers must conform with the Notice published in the Official Gazette, 1096 OG 30, (November 15, 1989).
